

Linkages

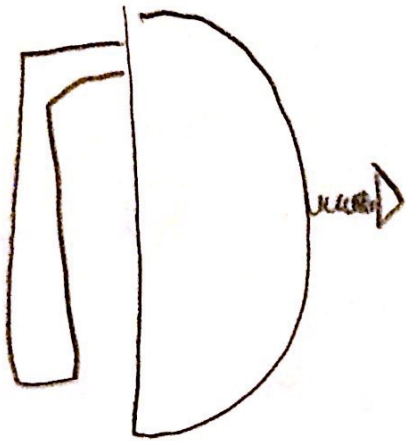

- Chair lever that allows chair to be leaned back and forth.
- I like this linkage because I use it a lot. It works very well.

Bass Drum Beater

- This gear transfers motion from the foot pedal to the beater against the bass drum.
- I use this linkage a lot, everytime I play my drums. This linkage has been working well for over 10 years.

Toilet Cleaner

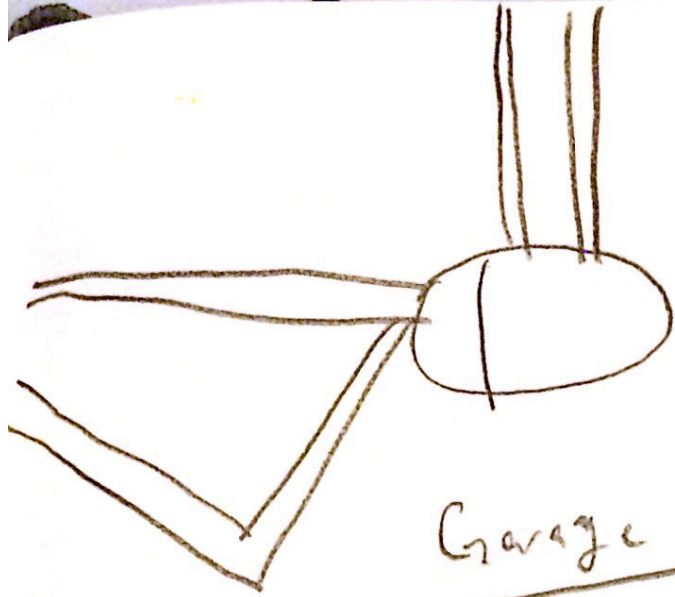

- This one is kind of different it's a spring like structure attached to a handle. This helps clean out pipes by catching obstructions.

E-piphany Turning Knobs

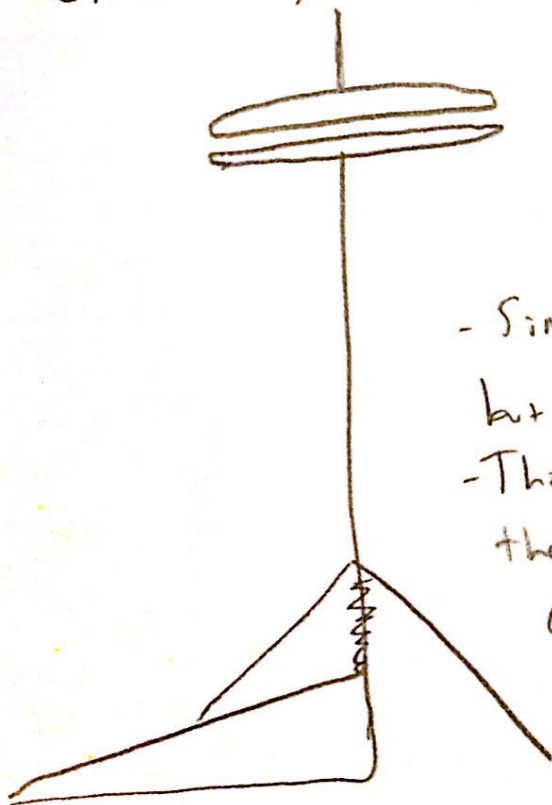

These levers apply tension to the attached string when you turn them.

It doesn't take a lot of force but it seems to apply a lot more tension to the strings.

Garage Door opener

This garage door linkage pulls up and pushes down because it moves in such a smooth sense.

Hi-Hat Pedal

- Similar to bass drum pedal but doesn't use circular gear.
- This chain attaches to the metal pipe that allows top hat to rise & fall.

- This linkage works very well, especially because this linkage is brand new.
